## 皮藤

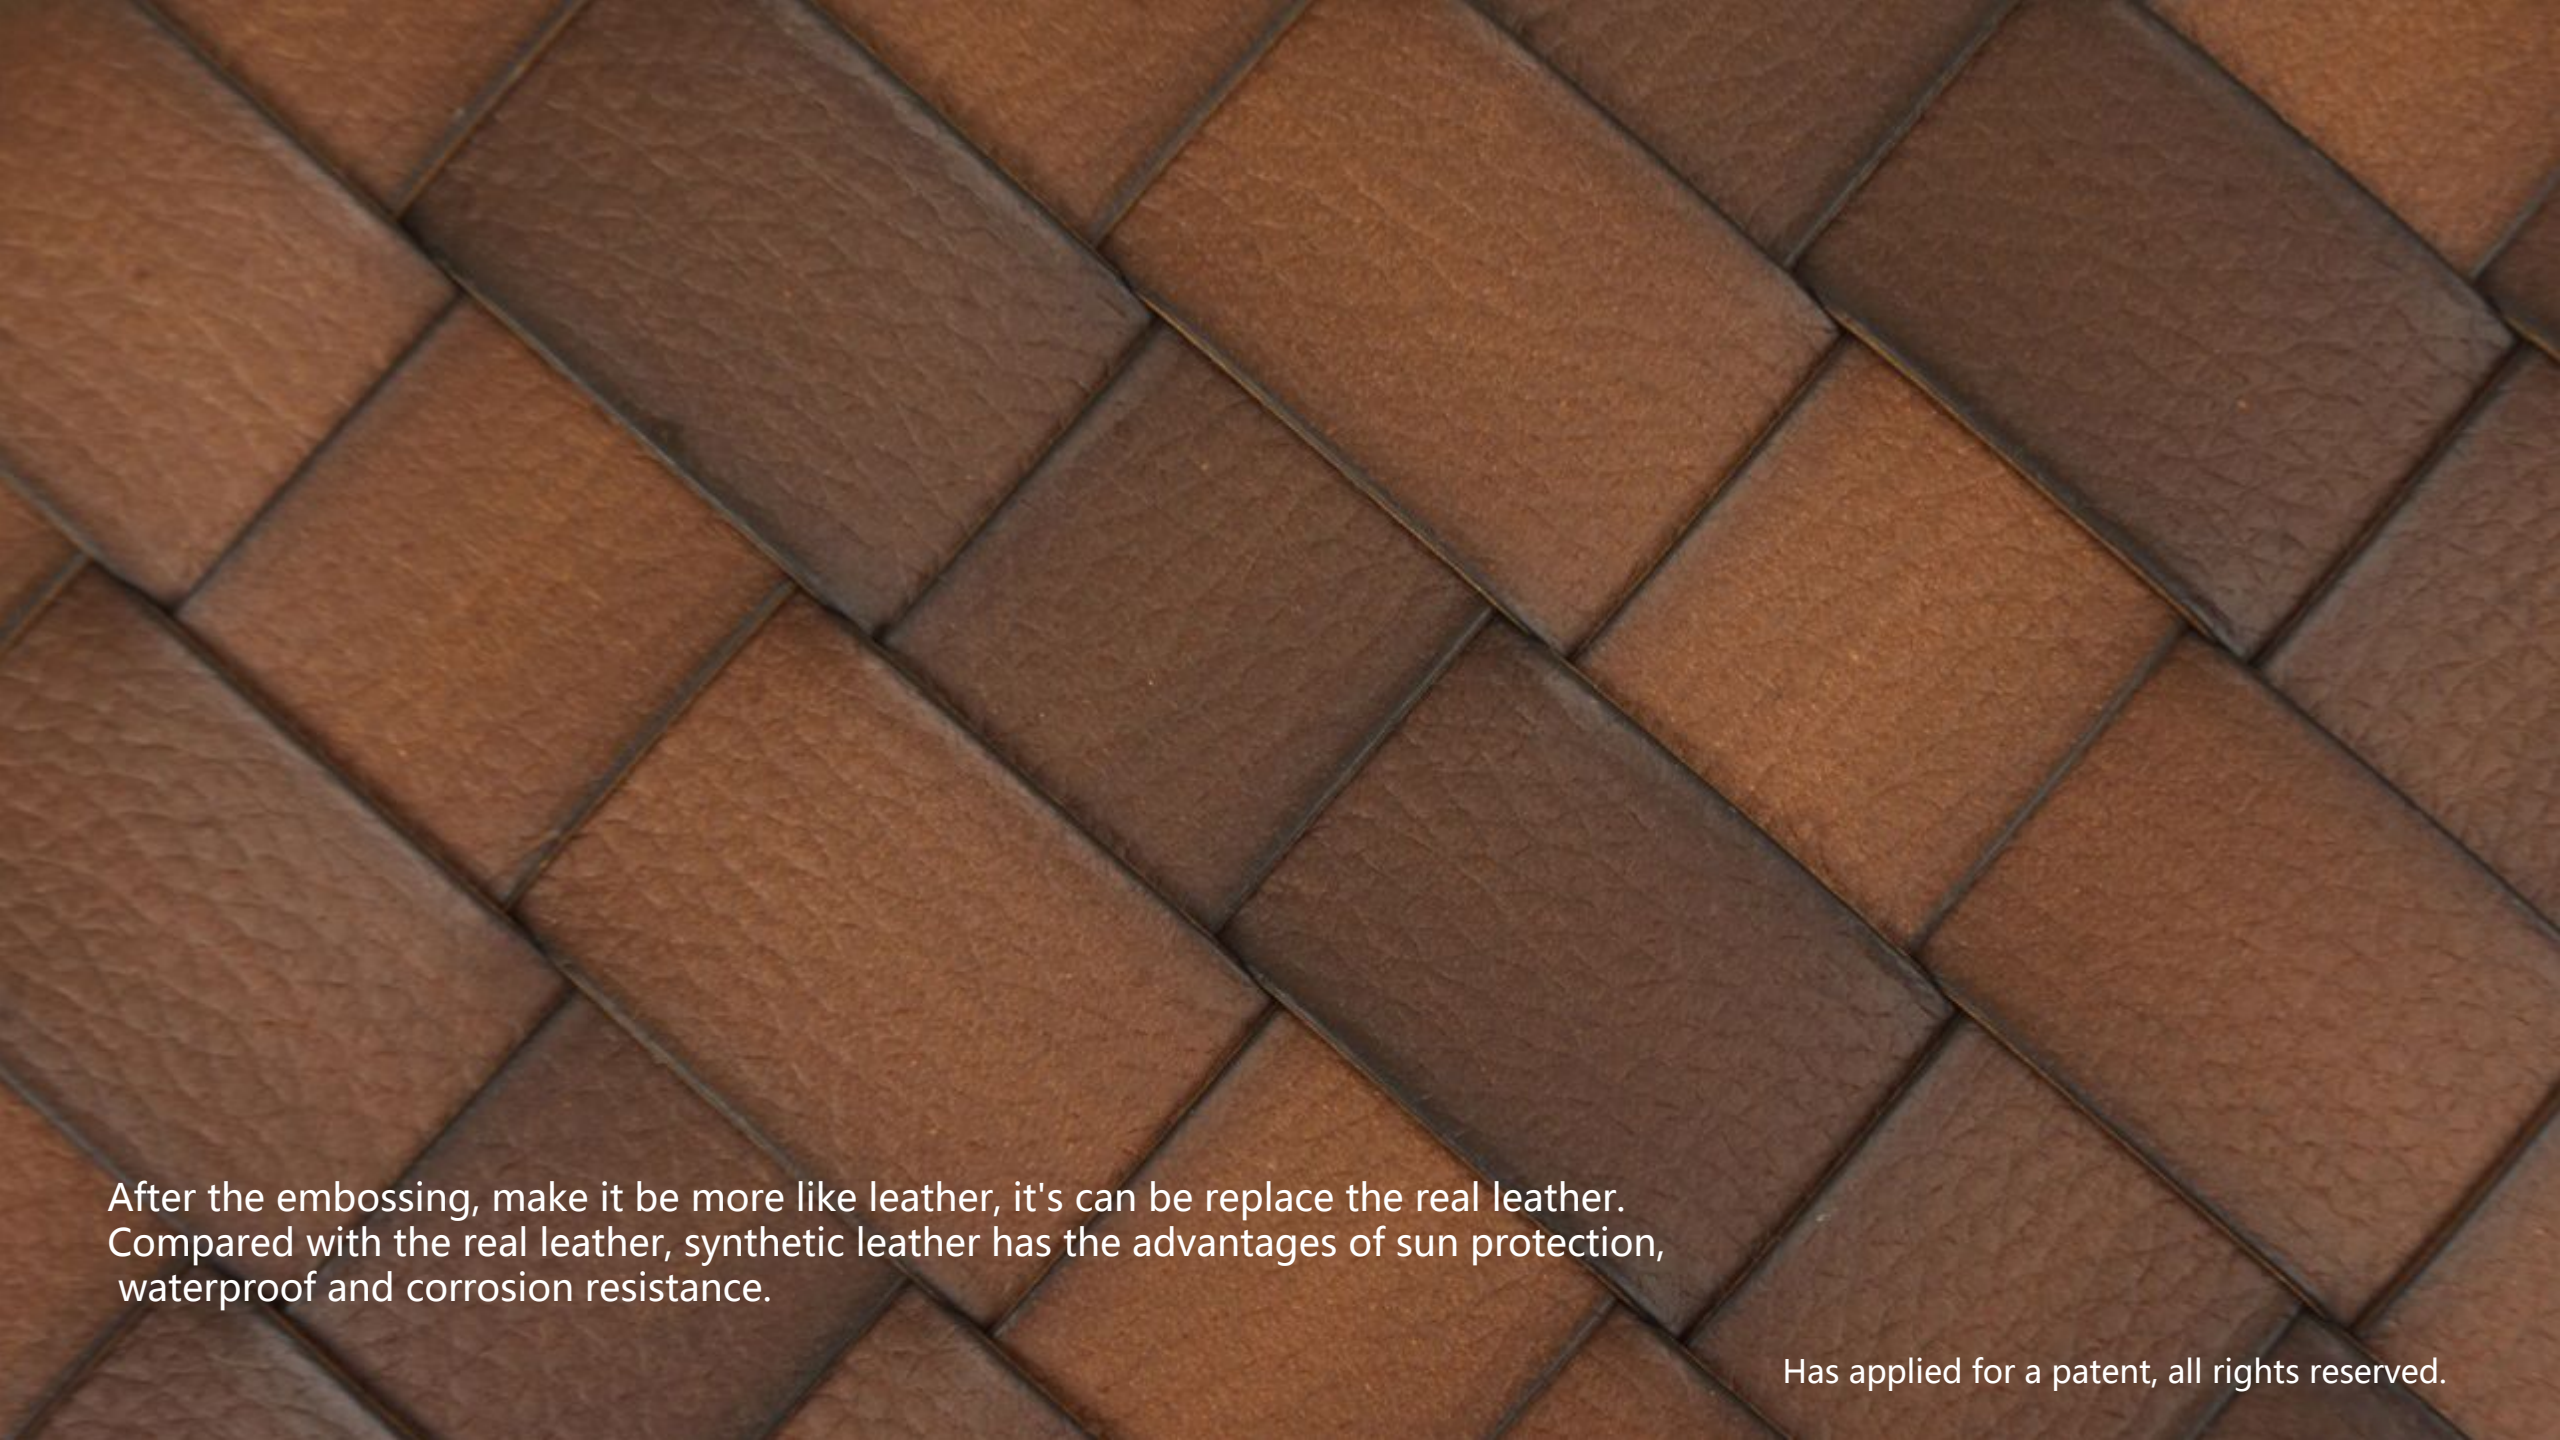

Leather fiber is a series of new products that we launched in 2019.

After two years of research and development, this product is AGO's new fourth-generation product. This product is a composite product that combines a variety of materials. Its combination determines the characteristics of the product: good feeling and look like a real leather, soft and tough, strong tensile force, the most importantly it is extremely light.

This product is ideal for weaving modern minimalist products, simple and textured, luxurious and not high-profile.

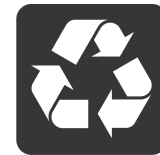

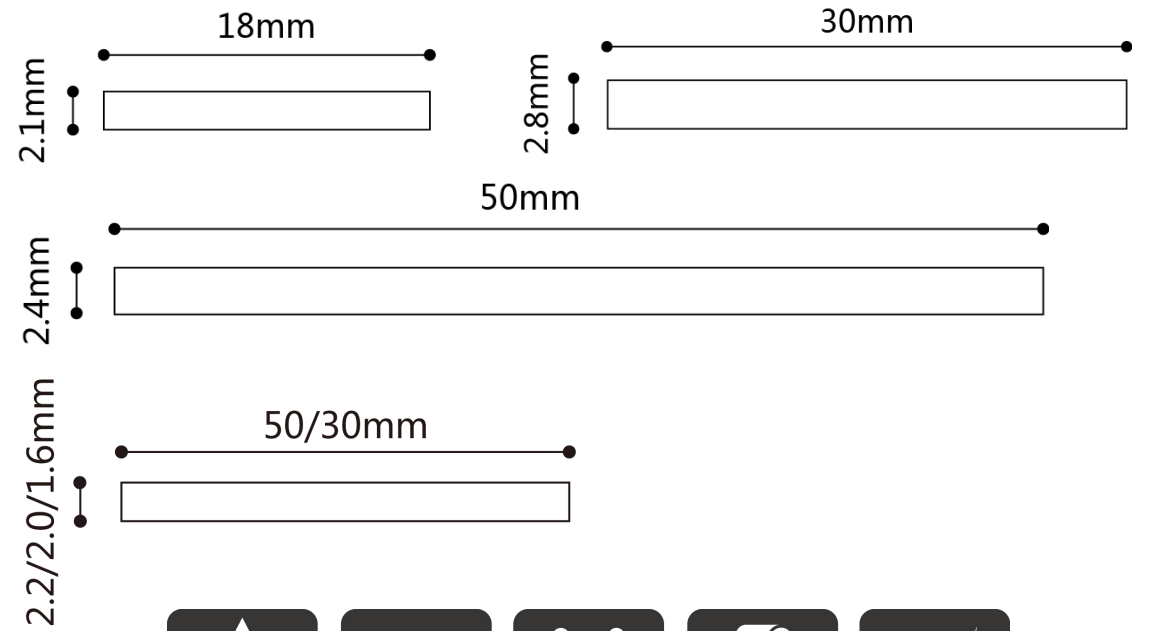

Has applied for a patent, all rights reserved.

After the embossing, make it be more like leather, it's can be replace the real leather.  
Compared with the real leather, synthetic leather has the advantages of sun protection,  
waterproof and corrosion resistance.

Has applied for a patent, all rights reserved.

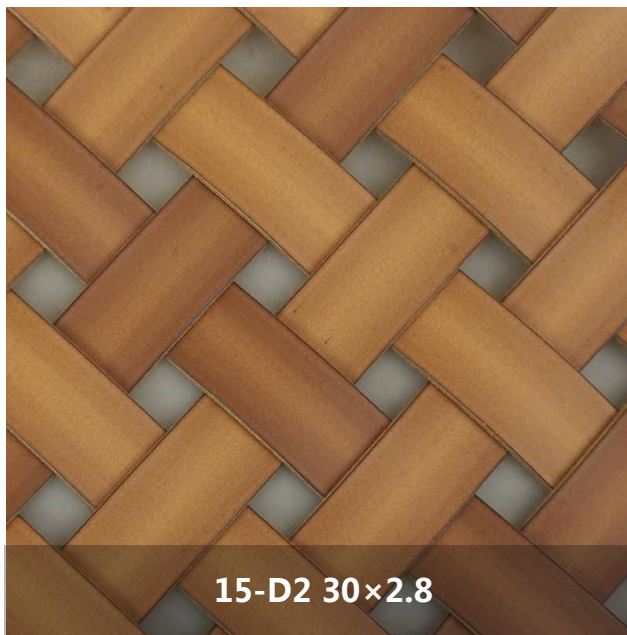

Has applied for a patent, all rights reserved.
