Carbon Wood Series

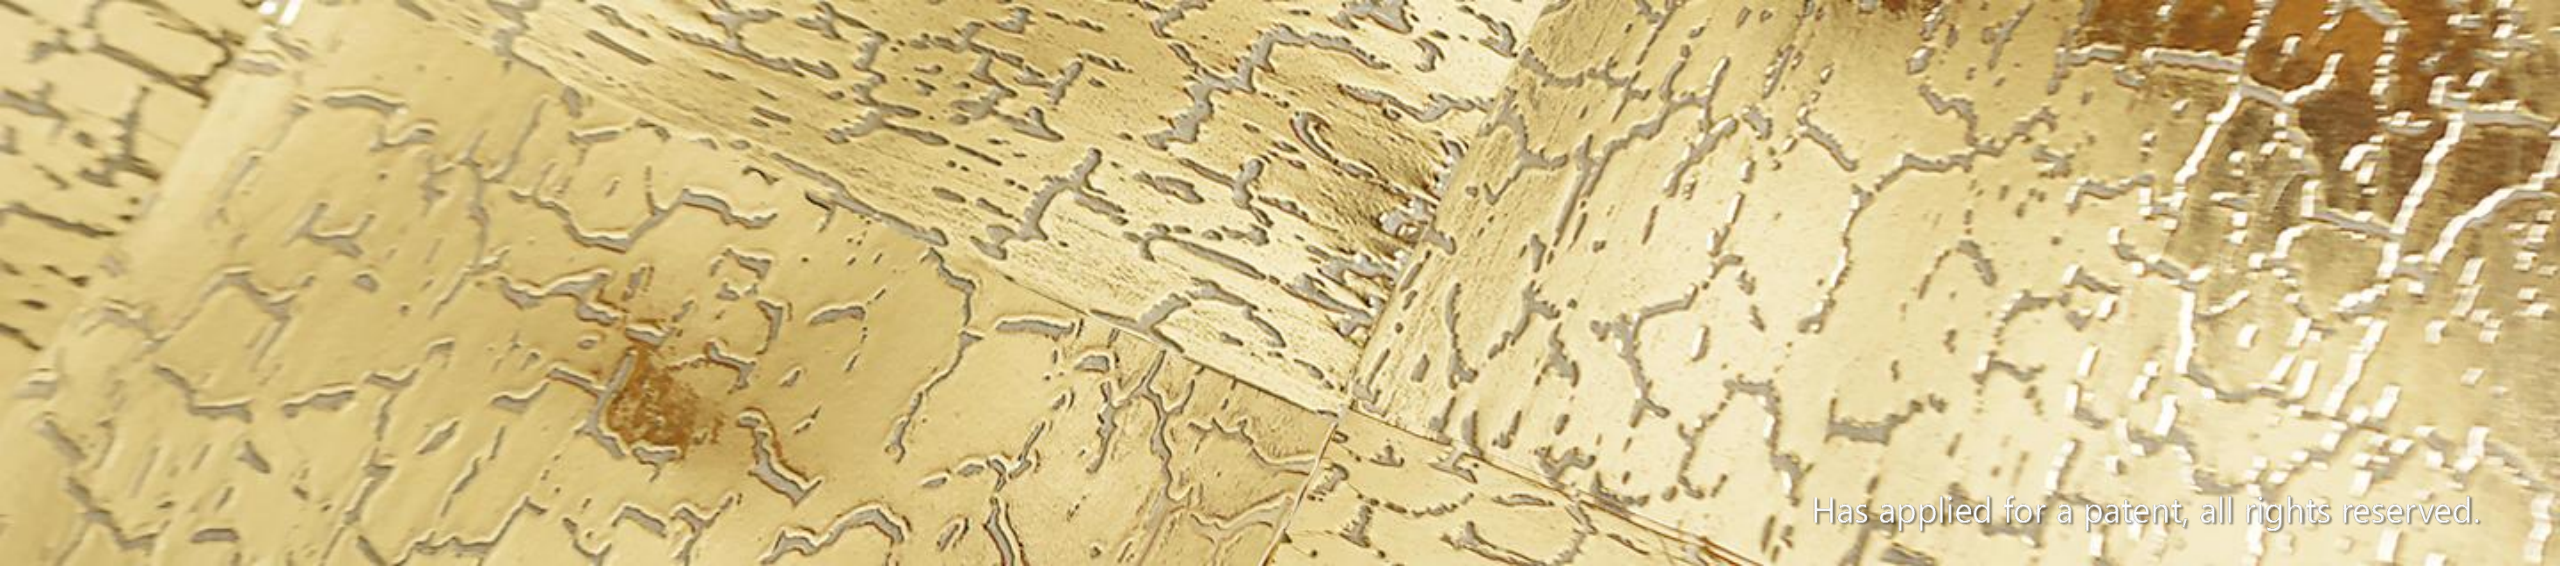

Gilded Carbon Wood Series — “Translucent Carbon Wood Grain + Gilded Luster Texture”

Crafted with innovative technology, this material combines a translucent carbon wood grainwith a gilded luminous finish, redefining the light-and-shadow aesthetics of high-end decorative materials. The translucent wood-grain design allows light to pass through naturally, creating a lively and layered visual effect, much like natural wood illuminated from within. The surface also features a delicate reflective sheen, available in Gold, Champagne, and Silver tones, where natural textures blend seamlessly with a light luxury style.

Gilded Carbon Wood offers strong toughness and flexibility, making it resistant to breakage while remaining easy to bend and shape. With convenient processing and a high finished-product yield, it is widely suitable for applications such as lighting fixtures, decorative screens, festive decorations, and premium storage products, perfectly complementing a variety of modern and light luxury design styles.

Size: 100*0.6mm

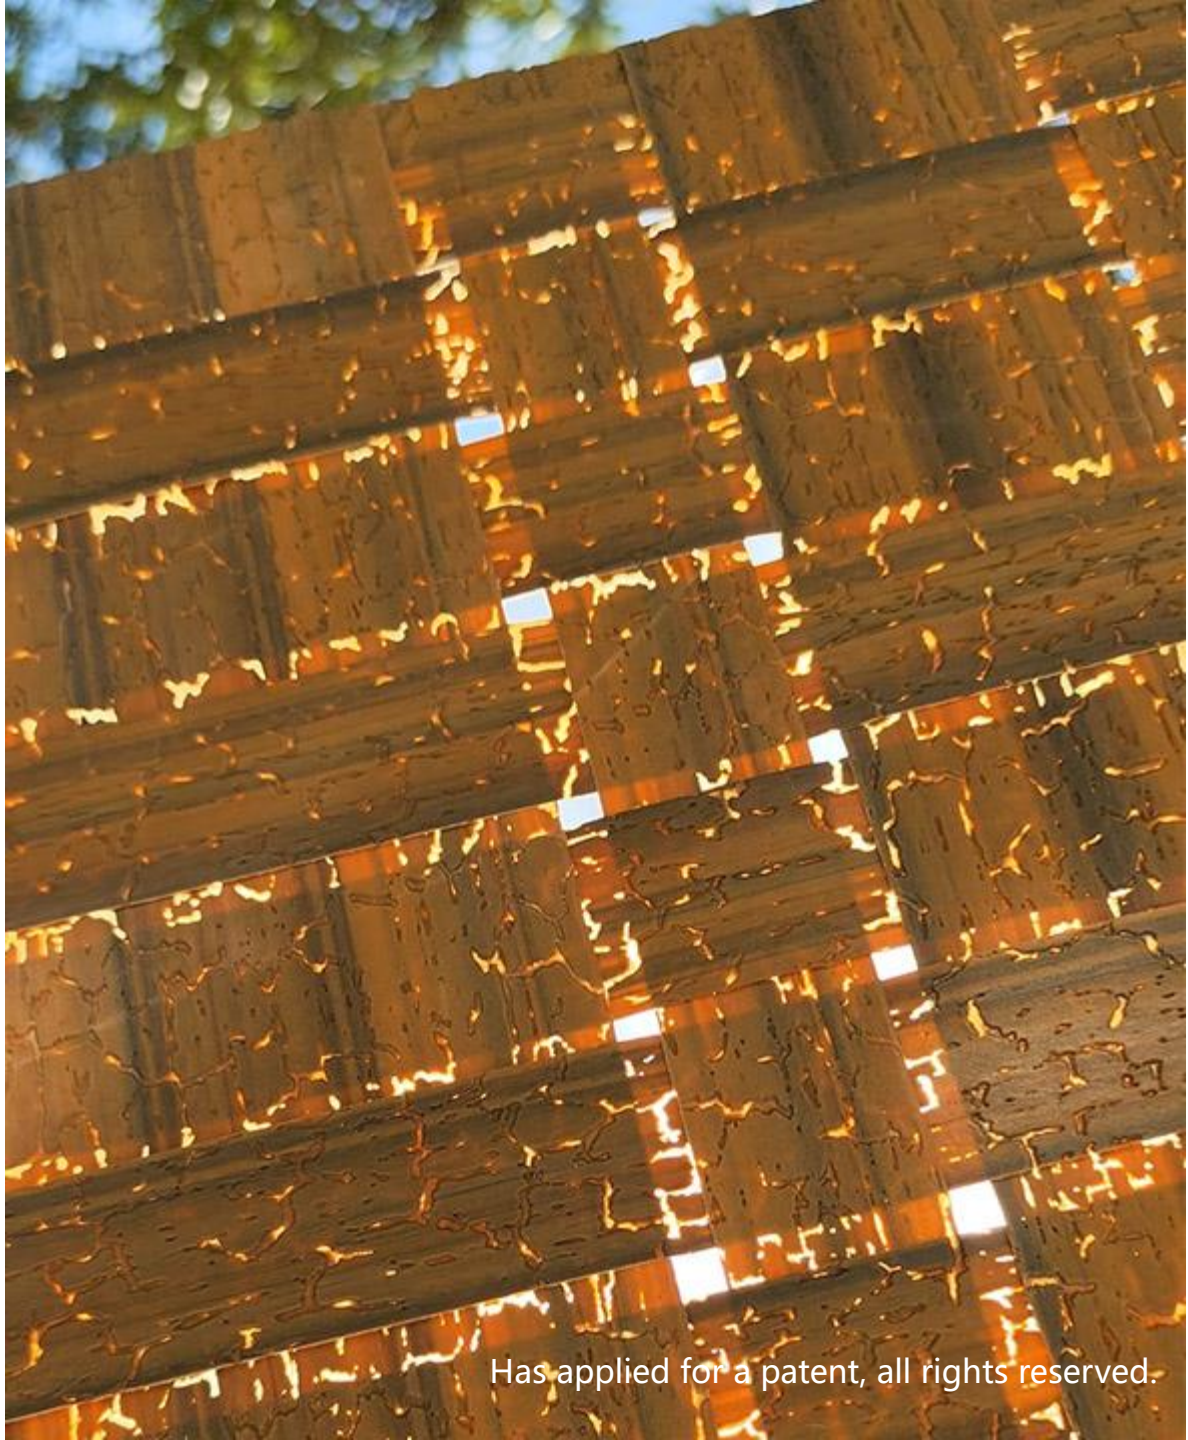

Carbon Wood Series

The Carbon Wood Series is an inevitable outcome on AGO's journey exploring new processes.

First, the problems were listed: How to add a concave-convex texture to rattan cane? How to make the texture deep and prevent rebound? Under the premise of solving these two problems, how to maintain the strength of the cane? Solving these problems one by one, the brand-new product—the "Carbon Wood Series"—was born.

This series comes in four colors using a brand-new coloring process, with rich lines. The concave-convex texture allows light to pass through, making it very distinctive for lighting products. The product specifications are currently the largest at AGO. If customers require smaller specifications, we can provide a product cutting service for a corresponding fee. Any desired specification within the scope can be freely determined!
